

### BEFORE YOU BEGIN

Read these instructions completely and carefully.

## ⚠ WARNING/AVERTISSEMENT

### RISK OF ELECTRIC SHOCK

- Turn power off before inspection, installation or removal.
- Properly ground electrical enclosure.

### RISK OF ELECTRIC SHOCK

- Follow all NEC and local codes.
- Use only UL approved wire for input/output connections. Minimum size 18 AWG (0.75mm<sup>2</sup>).

### RISQUES DE DÉCHARGES ÉLECTRIQUES

- Coupez l'alimentation avant d'inspecter, installer ou déplacer le luminaire.
- Assurez-vous de correctement mettre à la terre le boîtier d'alimentation électrique.

### RISQUES D' INCENDIE

- Respectez tous les codes NEC et codes locaux.
- N'utilisez que des fils approuvés par UL pour les entrées/sorties de connexion. Taille minimum 18 AWG (0.75mm<sup>2</sup>).

## Save These Instructions

These instructions do not purport to cover all details or variations in components nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problem arise which are not covered sufficiently for the purchaser's purpose, the matter should be referred to GE Current, a Daintree company.

Current does not claim liability for any installation not performed according to this guide or not by a qualified electrician.

## Prepare Electrical Wiring

### Electrical Requirements

The LED luminaire must be connected to the mains supply according to its ratings on the product label.

### Grounding Instructions

The grounding and bonding of the overall system shall be done in accordance to local electric code of the country where the luminaire is installed.

## For Your Safety

- Installation to be performed by factory trained or qualified personnel. Ensure this manual is provided to the installers and users.
- Use this product only in the manner intended by the manufacturer. If there are any questions or concerns, contact the manufacturer.

## Included Parts & Hardware

Housing(s)

Geartray(s)

Lens(es)

## Installation

- 1** Turn off the power to the fixture's circuit. With the first power-fed fixture supported in the air, raise the cable assemblies to their respective mounts, and connect the power cord (A) to the ceiling's power feed (B). Install the junction box cross bar (C) in the power feed side. The suspension cable assembly threads to the 1/4-20 stud in the cross bar. Be sure that the included SJ cord is laced through the 5" canopy cover (D) and secured by the cord grip (E). Follow governing electrical code for making your connections in the junction box. Number of conductors in the cable will vary with fixture specification.

- 2** Thread the non-powerfeed side cable onto the 1/4-20 threaded rod secured to structure. Be sure that the 2" canopy cover is in place before attaching.

- 3** With fixture now mounted, you can slowly lower it into place. Fine adjustments to height and leveling can be made at the gripper assemblies located on the upper surface of the fixture.

## COMPONENTS FOR SUSPENDED MOUNTING

The Reflection4 series cable mounting system consists of two main components: the power feed assembly (A) and the non-powerfeed assembly (B). Both items come shipped with and attached to the fixture to help ensure proper counts and clarification during assembly.

In preparation of installation, ensure that crossbars, canopy covers, cable grippers and cord grips are all accounted for. The cable mounting system is to be used with a standard j-box on the power feed side and 1/4-20 thread-all on the non-powerfeed side. Be sure to follow all governing code related to structural integrity and use of materials.

- 4** For continuous run/pattern installations: after first power-fed fixture has been installed, repeat step 2 for each subsequent fixture and corner. Proceed with **Housing & Run Assembly Installation** and **Wiring Instructions**. Finally, complete the installation by reinstalling the reflectors and lenses.

## Housing & Run Assembly Installation

- 1 Remove the lens and geartray to gain access to the joining hardware at the fixture ends of each run configuration. Geartray can be removed using a flathead screwdriver leveraged at the notches shown in detail 1.1.

- 2 Bring the fixtures (A & C) together using separate joining bracket (B) as an alignment guide.

- 3 Attach the housings (A & C) by using the supplied hardware in the header brackets to draw the pieces together tightly. Repeat steps 1–3 for continuous run/pattern installation, including corners.

## Wiring & Lamping

Standard geartrays come wired with 18GA solid core wire.

**Prior to wiring, fixture(s) must be mounted/hung and adjoined in the final installed position.**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. CAN ICES-005 (A) / NMB-005 (A)

**Note:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at their own expense.
